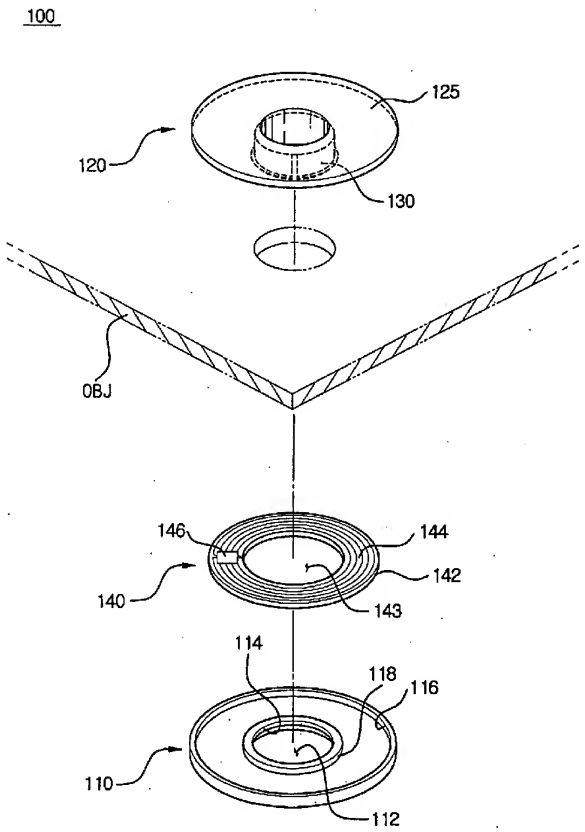
(54) Title: EYELET FOR A RADIO FREQUENCY IDENTIFICATION



(57) Abstract: Provided is an RED eyelet performing non-contact identification function. The RFID eyelet includes an eyelet washer and eyelet base composed of nonconductive material, and an RED module is interposed between the eyelet washer and eyelet base. The RFID eyelet contains the RFID module in nonconductive material, thereby performing smooth electromagnetic wave communication without disturbance, and the eyelet base is simply coupled. with the eyelet washer by using a slanted projection formed in the eyelet base and a locker formed in the eyelet washer. Also, the RED module can be easily installed by using an internal flange or external flange formed in the inside of the eyelet base or eyelet washer, thereby having a merit of mass production.
